

## **A real challenge in an international high tech & financial environment**

"Professional of the Financial Sector" (P.F.S.) and leader in Business Resilience in the heart of Europe, eBRC delivers "on demand" Business Continuity and Business Agility services in line with the business needs of its clients as well as national and international regulatory requirements. In this environment, eBRC is currently looking for a:

### **PROJECT ENGINEER (M/F)**

#### **Mission:**

- Taking part in design and technical studies of IT rooms (space layouts, electrical distribution, HVAC concepts, IT cabling, monitoring tools);
- Managing IT-room implementation projects (coordination, follow-up, costs control, installation checking according to the standards);
- Managing IT rooms in operation (capacity management, change management, incident & problem management);
- Writing and attending to the application of internal procedures relative to the Department activities;
- Following up the development and the configuration of new Data Centre infrastructures.

#### **Profile:**

- You are a high-level graduate in techniques (engineer, university/college);
- You have a significant background with at least five years of experience in the technical area and/or in a similar position;
- You are fluent in both French and English; German will give you an edge;
- You are rigorous, available and have a passion for new technical advances in construction and safety and you are willing to take part in ambitious projects;
- Dynamic and creative, you know what team spirit and client service mean.

eBRC gives you the opportunity to join a fast growing company. Within eBRC, you will benefit from a wide autonomy and an attractive wage based on your knowledge and motivations.

For a first confidential discussion about this challenging position, please contact Sandrine Boucquey – HR Department +352-26 06 1 or via email [recrutement@ebrc.lu](mailto:recrutement@ebrc.lu).
